

APPROVED WORK WINDOWS FOR FISH PROTECTION
IN ALL FRESHWATERS excluding WATERS WITHIN NATIONAL PARK BOUNDARIES,
COLUMBIA RIVER, SNAKE RIVER, AND LAKES
BY COUNTY AND SPECIFIC WATERCOURSE

(1) The general work window for a county applies to all streams within that county, unless otherwise indicated under specific stream and tributary work windows.

(2) The work window for a listed stream applies to all its tributaries, unless otherwise indicated. Some streams flow through multiple counties. Check the listing for the county in which work is to be conducted to determine the work window for that stream.

(3) Where a tributary is listed as a boundary, that boundary shall be the line perpendicular to the receiving stream that is projected from the most upstream point of the tributary mouth to the opposite bank of the receiving stream. (See Figure 1)

Figure 1. Stream boundary line

(4) Work within two hundred (200) feet landward of the State's ordinary high water line in waters of the U.S. listed as "submit application" or "closed" is not authorized by the Washington State Department of Fish and Wildlife (WDFW). Site review and a specific written authorization (and State HPA) are required for these state waters.

(5) Lakes do not include impoundments of the Columbia or Snake Rivers.

(6) For rivers and creeks entering marine areas (coastal watercourses) other than the Columbia River and its tributaries, the marine work window will apply to marine and estuarine areas, the freshwater work window will apply to riverine and palustrine areas. Marine, estuarine, riverine, and palustrine zones are defined based on *Classification of Wetlands and Deepwaters Habitats of the United States* published by the U.S. Department of Interior, Fish and Wildlife Service (USFWS). The boundaries between marine/estuarine and riverine/palustrine areas of coastal watercourses (other than the Columbia River and its tributaries) can be found on the National Wetland Inventory maps published by the USFWS (<http://www.nwi.fws.gov/>). These maps do not represent the actual boundaries of the jurisdictional area for any particular project but they can be used to determine the relative location of marine/estuarine and riverine/palustrine zones of coastal watercourses. In Table D-1, for all coastal watercourses except the Columbia River (see Table D-2) and its tributaries, the mouth (including associated sloughs or channel in the river delta) is defined as the boundary between marine/estuarine and riverine/palustrine zones.

(7) These “approved work windows” are based on best available information as of the date of the Services’ concurrence with this informal consultation. They may be amended or deleted in the future as new information is obtained. The Corps will use the most current version of these windows when the authorizing projects for which conformance with the ESA is, in part, based on the windows in this programmatic consultation.
